EARN YOUR TURNS There are so many ways to enjoy splitboarding.

Early in 2023, right after SHOPS 1st TRY, we had a chance to meet up with some of our Team Riders and Ambassadors in Bad Gastein, AT. The snow arrived just in time for our visit and we got in three great days of touring and riding. We laughed on the skin track, hooted on our descents, and mixed binding tech talk, life stories, and maybe a little Austrian Schnapps around the dinner table. This is our happy place and we came back refreshed and ready to get back after it.

Trips like these are fun, but you don't have to travel to far away mountains to appreciate the awesomeness of splitboarding. A quick lap with some good partners can be an amazing experience - whether you have epic snow or a bit more marginal conditions. It certainly beats scrolling your feeds and looking at other people's adventures.

As we roll into a new season, we will continue to focus on our manufacturing and design, but we won't lose sight of what got us this far - our stoke for walking around in the mountains and snowboarding with our friends.

As always, thanks for riding with us. #

Team

Our T1 binding system is the most recognizable, user-friendly, trusted, and efficient splitboard binding system on the market.

ST Whammy Bar:

A single fatty wire with a side arm lever. Overmolded thermoplastic sections allow you to switch easily from stowed, to low (12°), to high (18°) climbing positions and back again while touring.

- ST Touring Brackets & Snap Ramps: Bindings slide sideways into offset touring brackets and are locked into place with our snap ramps. Bracket mounting holes are slotted to compensate for the subtle differences in splitboard insert patterns.
- T1 Heel Rest: Catches the climbing wire in the 12° and 18° positions.
- Puck Compatibility: Slide the bindings on and snap the ramp down to ride. Flip the ramp up and slide the bindings off to remove. The most functional and intuitive way to attach your bindings to your board in ride mode.

The

SPLITBOARD BINDINGS

The Arc ST offers splitboarders an unmatched touring and riding experience. Lightweight with medium flex straps and highbacks, our industry-leading splitboard binding excels in the trees and powder, but is tough enough to handle more complex all-mountain conditions.

SPLITBOARD BINDINGS

LIGHTWEIGHT AND SURFY

CNC machined baseplates with maximum cutouts shave weight, yet maintain strength and performance. Cutouts conveniently allow for puck adjustment with bindings in place for precise stance placement.

Arc ST Asym Rip 'N' Flip Highbacks have a moderate amount of glass fiber fill for medium flex and a surfy feel. They feature individual left and right highbacks for improved ergonomics with a flattened top section giving riders increased lateral mobility.

Pillow Line Straps are lightweight, durable, comfortable, waterproof, one-piece molded construction, and made 100% in-house. Arc ST ankle straps are smaller around the boot with a flex window for max agility while maintaining support.

The ST Whammy Bar climbing wire is built right into the baseplate. Overmolded plastic where the bar contacts the baseplate allows for super-smooth climbing wire deployment and transitions.

ST Touring Brackets incorporate the best features of aluminum and thermoplastics. We overmold our custom plastic blend over and through the holes in the aluminum base, forming bushings that last four times longer than their previous brass version.

Ladders and adjusters are produced in-house with unique thermoplastics that maintain flex over a wide temperature range. Incorporates Burton's time-tested bomber buckles.

SURGE ST BINDINGS 12

SPARK R&D // 24-25

The lightest and most high performance splitboard bindings in the world.

Made with extreme attention to detail, premium materials, and custom components. Our PRO Series bindings are the culmination of our years in the forefront of splitboard binding technology and manufacturing. We built these for splitboarders who want the best of the best.

Carbon reinforced nylon highbacks

Carbon reinforced highbacks are more responsive, lighter, and stiffer than our standard glass reinforced highbacks. Injection molding allows for more complex geometry and improved impact strength compared to other methods of carbon fiber construction.

Full Pebax[®] plastics in Pillow Line straps, ladders, & adjusters

Pebax[®] is a premium material most often found in high-end ski boots as it provides consistent stiffness and improved toughness in cold temperatures. It's also 20% lighter than our standard material.

7075 Aluminum Heel Loops

7075 Aluminum heel loops are thinner and lighter than our standard heel loop while maintaining the required strength.

Every Gram Counts

A 65% weight savings is found by replacing 7 stainless steel components with 7075 aluminum hardware, custom made in-house.

Not only is the pro hardware lightweight, it also adds splitboard specific features. We switched from phillips to hex heads where we could, making screws less likely to strip. We also crafted our aluminum heel loop screw with a custom screw head shape that has more than double the drive depth of a standard button head screw to avoid stripping. Additionally, an unthreaded shoulder improves the connection with the heel loop.

340

The Arc ST Pro Splitboard Bindings feature all the same great assets as our standard Arc ST Bindings - ST Tech, T1 binding system, Tesla Snap Ramps, maximum baseplate cutouts, surfy Asym Highbacks, Pillow Line Straps with a flex window - but they are tuned up with premium materials and custom components.

Hardboot Bindings & Accessories

Dyno DH Hardboot Binding

The Dyno DH is our acclaimed hardboot specific splitboard binding. It is designed to fit a variety of touring boots and delivers high-end performance to the dedicated hardboot segment of splitboarders. All parts are designed and manufactured by us from start to finish for the all-around precision that you can only get from a Spark made product.

Dyno DH bindings are for riding only. Carry them in your pack on the way up, while using your tech toes for touring. Then slide the Dynos on your pucks and lock into place with the snap ramps for the ride down.

- Extremely Lightweight only 409 grams per binding
- Stainless steel toe and heel bails
- Toe clip is designed to fit even low profile AT boots
- Efficient design saves weight while maintaining backcountry dependability
- Set screw has a 4mm hex drive, found in our Spark Tool
- Baseplate heel end is reinforced and extra sturdy to avoid bending from heavy use
- Features Tesla Snap Ramps for speedy, pinless transitions
- Puck compatible (Spark Canted Pucks recommended)
- Fits boots with 255 340mm sole length

Weight: .90 lb/ea (409g) - 1.80 lb/pr (818g)

One Size 🔵 Black

Hardboot Dual Height Wires

Wires offer 12° and 18° angles for comfort on any skin track. Comes with a heel adapter that screws into your splitboard inserts, and places your dual height wires right where they need to be, hitting the perfect spot on the heel of your hardboot.

Weight: 3.46 oz/ea (98g) - 6.91 oz/pr (196g) Black

D Rex ST IPRO Crampons

Our legendary hardboot crampons are getting multiple upgrades for the 24/25 season! They come in 22% lighter than previous versions while still giving splitboarders total confidence in dicey terrain. The riser blocks remain unchanged and keep the full depth of teeth in the snow when using with heel risers.

Updated features:

- Nesting design saves space in the pack
- Manufactured with 7075 aluminum to be stronger and lighter with less drag
- Overmolded ST Axle allows for even easier installation, rotation, and removal
 New print graphic

Weight: 5.15 oz/ea (147g) - 10.3 oz/pr (294g) - Regular

Sizes: Regular, Wide

Black

Spark Tech Toes

A Spark original tech toe designed for the split-hardbooter. With its splitboard touring hole pattern this tech toe doesn't need an adapter - saving weight, unnecessary parts, and expense. It also has built-in claw mounts for the D Rex ST Pro crampon. Couple with our Hardboot Dual Height Wires to be ready to tour. The Spark Tech Toe is intended for splitboard touring only.

Featuring:

- 7075 aluminum sidearms
- Slotted rear holes compensate for insert pattern variability
 Heat-treated pins with an updated smooth finish for durability
- Stainless steel center screw

Weight: 5.22 oz/ea (148g) - 10.44 oz/pair (296g)

Black

SPLITBOARD GEAR & ACCESSORIES

Enjoy 4WD for your splitboard. An overmolded thermoplastic axle allows effortless installation and super-smooth rotation. Crampon teeth are fully engaged when used with or without the whammy bar for maximum security on dicey terrain. Our dual-width design features one crampon that is slightly wider than the other, allowing the crampons to nest together for easy handling and reduced packing space.

Weight: 5.5 oz/ea (156g) - 11.0 oz/pr (312g) - Reg Sizes: Narrow, Regular, Wide

Black Metal

An overmolded thermoplastic axle allows effortless installation and super-smooth rotation. A 7075 aluminum crampon body is just as strong, but lighter and thinner than our standard lbex ST. It slices through the snow even better with less drag, saving you valuable energy output on the skin track. All in all, the Ibex Pro ST is 30% lighter than our standard Ibex ST - the lightest split crampon in the world. Its dual-width design features one crampon that is slightly wider than the other, allowing the crampons to nest together for easy handling and reduced packing space.

Weight: 4.23 oz/ea (120g) - 8.46 oz/pr (240g) - Reg Sizes: Narrow, Regular, Wide

Black/Green

Both Ibex ST and Ibex ST Pro are compatible with all Tesla and T1 bindings.

SPARK R&D // 24-25

Spark Pucks

Channel-like stance adjustability for splitboards built with inserts. This breakthrough in design has riders beyond stoked, and has made Spark Pucks our most popular splitboard accessory.

- Oversize aluminum center disc overlaps binding channels for maximum strength and rigidity
- Bindings slide on soft nylon material for effortless transitions
- Near-infinite adjustability, for your perfect stance and placement: +/- 1/4" (6.5mm) toe/heel adjustment in .05" (1.3mm) increments +/- 30° range of angle adjustment in 3°
- increments Stance width adjustments in .17" (4.2mm) increments
- Works with all puck compatible splitboard bindings

Weight: 10.19 oz/pr (289g)

Spark Canted Pucks

Our canted version has all the same great features as our Spark Pucks. With 3° canting to reduce strain, your knees will thank you.

Weight: 11.36 oz/pr (322g)

Four Awesome colors in both Canted and Regular Spark Pucks!

We have the quiver game dialed with our Solid Board Pucks, because let's face it, sometimes you're just not on your split. Great for solid board mountaineering, snowmo-boarding, trips where you are traveling with multiple boards, or days when you may see a mix of resort riding and splitting. You may have a quiver of boards, but you only need one set of bindings.

- Near-infinite adjustability, just like our Spark Pucks: +/- 1/4" (6.5mm) toe/heel centering adjustment in .08" (2.1mm) increments
- -12° to +30° angular adjustment in 3° increments
- Stance width adjustable in .2 inch (5mm) increments
- Can be used with 4x2 insert and channel boards
- Lightweight
- Works with all puck compatible splitboard bindings

Weight: 10.09 oz/pr (286g)

Fixie Clips

Our Fixie Clips come in a sleek, lightweight aluminum design that features no moving parts. It's stiff, simple, and requires no rotation - just put your board together and go. The Fixies have builtin adjustability to help compensate for varying board hole patterns. They shed snow and ice, and won't slip over time.

Compatibility: Fixie Clips come in both through-mount and top-mount styles to accommodate any board construction.

Weight: 1.98 oz/pr (56g)

For boards that have inserts at the clip mounting points. (you do not see any screw heads on the base of your board)

Top-Mount Metal Black —

Through-Mount Metal Black Weight: 2.26 oz/pr (64g) For boards that are drilled through at the clip mounting points. (you can see screw heads on the base of your board)

SPARK R&D // 24-25

Summit Skins

Our Summit Skins are a full nylon custom design manufactured in the USA. They're lightweight and feature solid grip and a smooth glide. The long-lasting glue is laid down in multiple stripes to be sticky on your board, but not too sticky to pull apart. Summit Skins are made for real backcountry touring, not just pristine skin tracks. They're built to be durable and to keep gripping and gliding their way through anything the skin track brings - deep pow, steep ice, spring slush, extreme cold, dirt, rocks, and roots.

Summit Skins feature our versatile tip and tail clips. These clips work with the ever-changing variety of board shapes on the market. Dual angled hooks accommodate pointy to blunt profiles and everything in between. Extended slots in the tailclip offer boundless adjustability for the perfect combination of position, angle, and tail stretcher tension with your board.

Spark Mountain Graphic

Weight: 0.64lb/ea (291g) - 1.28lb/pr (582g) - Short Short: 147-161cm / Medium: 159-175cm / Long: 172-186cm

Tip & Tail clips fit all board shapes.

Verts

When skinning just isn't an option, post-holing shouldn't be either. Our collaboration with Verts offers you a split friendly climbing alternative - the first ever splitboard specific snowshoe.

- Slide your Spark binding directly onto the adapter, no need for a separate snowshoe binding.
- Designed specifically for ascending steep slopes.
- Compact 18.75" x 8.5" (48cm x 22cm) footprint.
- Toe forward design for fatigue-free front pointing.
- High performance non-stick, super tough nylon.

Weight: 1.21 lb/ea (548g) - 2.41 lb/pr (1095g)

Tailclip Kit

Our tailclip kit is a retrofit addition to any skins. All you need are scissors and a hammer large diameter rivets make for an easy and secure installation. Asymmetric clips with dual angled hooks and an extended slot design yield maximum adjustability to fit any board shape (even swallowtails).

- Weight: 2.2 oz (63g)

TOURING TOOLS 30

T1 Riser Kit

Big Feet? We've got you covered. Our riser kit screws in underneath touring brackets and heel rests to raise you up. This increases the binding rotation angle while touring to prevent toe strike and increase stride length. Compatible with all Tesla T1 bindings.

Weight: 5.43 oz/pr (154g)

T1 Step Locker

The option to lock your heel while touring helps you better adapt to diversified terrain types where quick descents, side stepping, and skate-splitting become more effective means of backcountry travel.

- Rotate the lever to lock the heel in position
- Plastic lock bar grabs underneath the baseplate without wearing either piece
- Heel stays locked until you rotate the lever to the unlocked position
- Locker held securely in both locked and unlocked positions
- Locker assembly screws in under heel rest
- Forward releasable for added safety
- Compatible with all Tesla T1 bindings
